TCAR & PCAR Target Audience

Education for Nurses Who Practice Anywhere Along the Trauma Care Continuum

Trauma Training When You Need It

Unlike resuscitation-focused trauma verification courses, TCAR (Trauma Care After Resuscitation) and PCAR (Paediatric Care After Resuscitation) are designed for nurses and AHPs who practise anywhere along the trauma care continuum, from prehospital to rehabilitation. TCAR and PCAR present trauma nursing as a process that spans all hospital units and speciality areas.

- Emergency Nurses
- Theatre Nurses
- Critical Care Nurses
- HDU & Ward Care Nurses
- Rehabilitation Nurses

'But I Don't Do Just Trauma'

TCAR and PCAR principles apply beyond trauma care, teaching essential skills in patient assessment, anticipating care needs, recognising deterioration, understanding physiology, and evaluating interventions. Nurses across specialities, including cardiac, oncology, obstetric, women's health, and neonatal care, have benefited from ***an engaging professional development experience*** that strengthens clinical reasoning and supports excellent patient care.

There's an Audit-Only Option

Trauma verification is an essential job requirement for many learners, but others may only need basic trauma education. Programme administrators can select the 'Audit-Only' option when assigning a course, allowing learners to complete the educational modules without taking the rigorous posttest.

'But I'm Not a Nurse'

Designed for trauma nurses, TCAR and PCAR also offer valuable insights for a wide range of healthcare professionals. The multidisciplinary principles benefit paramedics, speech and language therapists, dietitians, physiotherapists, and others involved in patient care.
